Supporting an ongoing research project

Sir or Madam,

In the context of an ongoing IGF research project entitled:

"Machine Learning Framework for dynamic image style evaluation".

we need your support.
The aim of this research project is to evaluate image data according to
application-specific image styles using artificial intelligence. For this
purpose, we need data sets of images (uncorrected images) that have been
prepared or retouched (corrected images) for exemplary image styles or
looks (e.g. tourism, fashion, food, cosmetics, etc.). They serve the neural
network for training the respective image style as well as the members of
the project-advisory committee (PA) for additional visual evaluation.

In light of the General Data Protection Regulation (GFPR), we would like to
emphasise that the data sets submitted to us will not be used unauthorised
in publications or published electronically. They will be processed exclusively
by the staff of the two research institutes Fogra and at RWTH Aachen
University.
Furthermore, we assure that the data sets are stored and processed
exclusively on local servers of the two research institutes (Fogra in Munich
and RWTH Aachen in Aachen). The connection between all locations is end
to end encrypted.

By submitting the data, you assure that you have the appropriate rights of
use or copyright to the images.

Thank you for your support

Dr. Andreas Kraushaar
